

PRACTICAL ASSIGNMENT

TOPIC: Systems Request (Real-Life Campus Problem)

Background

Every successful information system begins with a **Systems Request**, which formally identifies a problem or opportunity and justifies why a new system is needed.

In this assignment, students are expected to **observe their campus environment**, identify a real operational challenge, and propose a system solution using the **Systems Request principle**.

Objective of the Assignment

By the end of this assignment, students should be able to:

- Identify a real-life problem within the campus environment
- Apply systems analysis thinking to propose a solution
- Prepare a structured **Systems Request**
- Communicate system ideas clearly through a professional presentation

Task Description

Each student (or group of **2–3 students**, if permitted) must:

1. **Identify ONE real problem on campus** that can be solved using an information system.
Examples include (but are not limited to):
 - Course registration delays
 - Hostel allocation issues
 - Manual attendance tracking
 - Library book tracking
 - Lost student ID management
 - Examination timetable clashes
 - Complaint reporting systems
 - Asset or equipment tracking
 - Student feedback management
2. **Propose a system solution** to address the identified problem.
3. Prepare a **minimum of FIVE (5) presentation slides** based on the **Systems Request principle**.

Presentation Structure (Minimum 5 Slides)

Slide 1: System Title & Background

- Proposed system name
- Brief description of the campus problem
- Department/unit affected

Slide 2: Business Need (Problem Statement)

- Clearly describe the problem
- Who is affected by the problem?
- Why the current method is inefficient

Slide 3: Business Requirements

Outline what the proposed system should do, for example:

- User registration and login
- Data capture and storage
- Reporting and tracking
- Notifications or alerts

(At least **4–6 clear requirements**)

Slide 4: Expected Business Value

Explain the benefits of the proposed system, such as:

- Improved efficiency
- Time savings
- Reduced errors
- Better decision-making
- Improved student or staff experience

Slide 5: Special Issues or Constraints

Identify any challenges or limitations:

- Budget constraints
- Internet availability
- User training needs
- Data security and privacy
- Resistance to change

Submission Requirements

- Presentation must be in **PowerPoint (.pptx)**
- Minimum of **5 slides** (excluding title slide if separate)
- Clear, concise, and well-structured content
- Use of diagrams or icons is encouraged (but optional)

Assessment Criteria

Criteria	Marks
Problem identification & relevance	4
Clarity of Business Need	4
Quality of Business Requirements	5
Expected Business Value	4
Presentation clarity & structure	3
Total	20

Instructions to Students

- Do **not copy** existing systems
- The problem must be **real and observable on campus**
- Focus on **analysis**, not system coding
- Keep slides **simple, professional, and logical**
